

Etan Joseph Heyman

Full Stack Engineer | AI Products, Web Platforms & Infrastructure

Rehovot, Israel | +972 54 7589755 | etan@heyman.net

github.com/EtanHey | linkedin.com/in/etanheyman

Full-stack engineer shipping AI products end to end across user workflows, APIs, data persistence, and production reliability. Built a voice-AI recruiting platform behind 1,000+ completed applications and cut failed interview sessions from ~35% to <2%. Maintains BrainLayer, a local-first hybrid-search memory engine indexing 680K+ chunks from 17.8K source files.

Professional Experience

Contract Full-Stack Engineer | HappyCampr (formerly Cantaloupe AI) 06/2026 – Present

- Hardening HappyCampr's Next.js/LiveKit signup and interview lifecycle with serialized connections, bounded retries, and Axiom telemetry.

Founding Engineer | Cantaloupe AI (Techstars '25) - Denver, CO 08/2024 – 01/2026

- Built four platform generations across React Native, SvelteKit/Go, Bubble.io, and Next.js/Supabase for candidate, employer, and admin workflows.
- Owned ATS/HRIS and scheduling integrations across Merge.dev, Unified.to, Nylas, Twilio, Zapier, and Make, with schema mapping, OAuth flows, webhook verification, and rate-limited imports.
- Built Clio, a Vapi.ai voice-interview agent driving 1,000+ completed applications in production, and cut failed sessions from ~35% to <2% with resilient connection handling and failure telemetry.
- Co-owned the PostgreSQL/Supabase layer across schema design, migrations, indexes, RLS, SQL functions, and Edge/RPC boundaries; page-by-page persistence prevented assessment data loss.

Full-Stack Developer & Project Lead | Weby - Remote 12/2023 - 08/2024

- Grew from developer to project lead, shipping four client products and leading two, including an e-commerce storefront and a photography CMS with Cloudinary image ingestion.

Software Engineering Intern (Core ATS Team) | JAMSNEXT - Remote 12/2022 - 06/2023

- Owned the Next.js frontend of an ATS Kanban MVP on a three-engineer team, syncing state with .NET Lambda APIs.

Open Source Projects & Developer Tools - More at etanheyman.com and [GitHub](https://github.com)

BrainLayer (github.com/EtanHey/brainlayer) - Persistent memory MCP for AI agents

- Architected Hydra hybrid search over 680K+ indexed chunks from 17.8K source files, fusing semantic, lexical, and trigram retrieval via Reciprocal Rank Fusion, and built BrainBar, a native Swift/SwiftUI macOS companion.

Education

Full-Stack Development Program | INT College - Tel-Aviv, Israel 10/2021 - 10/2022

- Graduated with Distinction from a 400-hour, full-year full-stack development program.

Technical Skills

TypeScript, JavaScript, React, Next.js, Node.js, Go, Python, Swift, PostgreSQL, Supabase, REST APIs, webhooks, OAuth, JWT, MCP servers, Git, CI/CD

Languages: Hebrew (native) | English (near-native) | Spanish (intermediate)
